Inter-American Tropical Tuna Commission

Strategic Science Plan – review of past activities and considerations for the future
Plan Científico Estratégico - revisión de actividades anteriores y consideraciones para el futuro
(SAC-14-01)

14^a Reunión del Comité Científico Asesor - 15-19 de mayo de 2023
14th Meeting of the Scientific Advisory Committee – 15-19 May 2023
La Jolla, California, USA- EE.UU.

Temario - Outline

- El Plan Científico Estratégico (PCE) de la CIAT (2019-2023) finaliza este año
 - Dar una mirada retrospectiva a los logros y deficiencias del PCE 2019-2023
 - Introducir algunas consideraciones sobre los puntos fuertes y los desafíos para el próximo PEC
- The 2019-2023 IATTC Strategic Science Plan (SSP) ends this year
 - Taking a retrospective glance at the accomplishments and shortcomings of the 2019-2023 SSP
 - Introduce some considerations on strengths and challenges for the next SSP

¿Por qué necesitamos un Plan Estratégico? Why do we need a *Strategic Plan*?

- Solicitud de la Comisión
- "Hoja de ruta" para planificar y priorizar las actividades de investigación
- Presentar a la Comisión y las partes interesadas
- Presupuestar
- Evaluación de resultados

- Request from the Commission
- "Road map" for planning and prioritizing research activities
- Present to Commission and stakeholders
- Budgeting
- Performance evaluation

Hoja de ruta para planificar y priorizar las actividades de investigación

Road map for planning and prioritizing research activities

4. ECOLOGICAL IMPACTS OF FISHERIES: ASSESSMENT AND MITIGATION

Goal L: Evaluate the ecological impacts of tuna fisheries

- L.1. Develop analytical tools to identify and prioritize species at risk for data collection, research and management
- L.2. Conduct ERAs of EPO fisheries to identify and prioritize species at risk

Goal M: Mitigate the ecological impacts of tuna fisheries

- M.1. In collaboration with the industry, conduct scientific experiments to identify gear technology that will reduce bycatches and mortality of prioritized species
- M.2. In collaboration with the industry, conduct scientific experiments to develop best practices for the release of prioritized bycatch species
- M.3. Conduct spatiotemporal analyses to identify areas of high bycatch/catch ratios for potential use in spatial management
- M.4. Investigate alternative tools for bycatch mitigation
- M.5. In collaboration with the industry, conduct experiments to develop best practices for mitigating the impacts of fishing on habitats in the EPO

3. SUSTAINABLE FISHERIES

Goal H: Improve and implement stock assessments, based on the best available science

- H.1. Undertake the research necessary to develop and conduct at least one benchmark stock assessment for yellowfin and bigeye tunas
- H.2. Develop a spatially-structured stock assessment model for bigeye tuna as a basis for management advice, and initiate a similar model for yellowfin tunas
- H.3. Develop a benchmark stock assessment for skipjack tuna (conditional on implementation of tagging program (Project E.4)
- H.4. Develop update assessment and/or stock status indicators for tropical tunas to ensure that management advice is current
- H.5. Undertake the research necessary to develop and conduct data-limited assessments for prioritized species
- H.6. Maintain active participation in ISC stock assessments
- H.7. Develop conventional stock assessments for data-rich prioritized species and species of specific interest
- H.8. Assess the status of dolphin stocks in the eastern tropical Pacific

Una herramienta para presentar las actividades de investigación a la Comisión

A tool to present research activities the Commission

PROJECT A.3.b: Develop databases of biological and fisheries parameters to support Ecological Risk Assessment and ecosystem models	
THEME: Data Collection	
GOAL: A. Database maintenance, preservation, and access	
TARGET: A.3. Standardize and automate data submissions	
EXECUTION: Data Collection and Database Program, Biology and Ecosystem Program	
Objectives	Develop a comprehensive database of best-available biological and fisheries data to provide key parameters for Ecological Risk Assessment (ERA) and ecosystem models
Background	<ul style="list-style-type: none"> The Antigua Convention requires the IATTC to ensure the sustainability of target, associated, and dependent species affected by EPO tuna fisheries, and the ecosystem to which they belong. ERA and ecosystem models, used by IATTC staff to assess the ecological impacts of tuna fisheries in the EPO, require information on biological, physiological and trophodynamic characteristics of thousands of species in the EPO ecosystem. A database with the most up-to-date information for impacted species is required to expedite the initial parameterization, or updating, of future models.
Relevance for management	<ul style="list-style-type: none"> The database will contain data needed for ERAs and ecosystem models, used to identify and prioritize data collection, mitigation, and/or management measures for vulnerable species. The databases could be shared with scientists of CPCs.
Duration	48 months
Workplan and status	<ul style="list-style-type: none"> Jan–Apr 18: Create a basic database structure ready to be populated with biological parameters and associated literature sources. Ongoing: Conduct biological and ecological literature searches for species that interact with EPO fisheries Ongoing: Conduct literature searches for species that interact with EPO fisheries, identify fishery-related susceptibility parameters for bycatch species, create database
External collaborators	Scientists from CPCs interested in contributing to and/or using the databases
Deliverables	Comprehensive life history and susceptibility information that can be shared with IATTC (for a particular region and/or fishery.

Informe de avances del proyecto (segunda página)

Project progress report (second page)

PROJECT A.3.b: Develop databases of biological and fisheries parameters to support Ecological Risk Assessment and ecosystem models
Updated: March 2019
Progress summary for the reporting period
<ul style="list-style-type: none"> Life history database is in development for all species reported to have interacted with purse-seine and large-scale longline fisheries Values for fisheries-related susceptibility parameters have been obtained for many of the bycatch species
Challenges and key lessons learnt
<ul style="list-style-type: none"> Database development will be ongoing and parameter values will be updated as new literature and improved data becomes available
Reports/publications/presentations
Two manuscripts that use this life history and susceptibility data have been submitted to scientific journals

14 PROJECT(S)

L.1.a - Develop habitat models for bycatch species caught in the EPO to support ecological risk assessments (ERAs)

01 Jun 2018 - 01 Jun 2019 **Funded**

Objectives:

- To use presence-only catch data to develop habitat models for all bycatch species caught in EPO tuna fisheries to facilitate mapping of their geographic range.
- To make distribution maps available in a format suitable for use as base

L.1.b - Develop a flexible spatially-explicit ERA approach for quantifying the cumulative impact of tuna fisheries on data-limited bycatch species in the EPO

01 Jan 2018 - 31 Dec 2021 **Funded**

Objectives:

- To develop a spatially-explicit model for quantifying the cumulative impact of multiple fisheries on data-limited bycatch species in the EPO
- To use the model to prioritize potentially vulnerable species for further

Center for the Advancement of Population Assessment Methodology

item 7.b

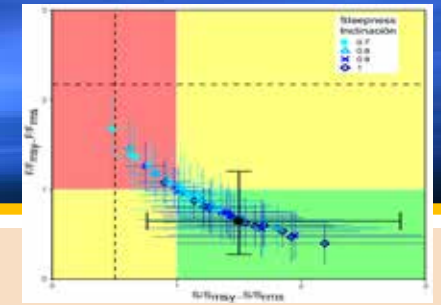

Staff

Evaluación de stock: Fortalezas y Desafíos

Stock Assessment Program: Strengths and challenges

Principales funciones

- § Mejorar e implementar las evaluaciones de poblaciones, con base en la mejor ciencia disponible
- § Probar estrategias de extracción usando evaluaciones de estrategias de ordenación (EEO)
- § Apoyo estadístico en el diseño de programas de colecta de datos

Fortalezas

- § Personal en su mayoría permanente, de alto nivel y gran dedicación

Desafíos

- § Estrategias de extracción: Financiación incierta y limitada (p. ej., quedan 5 meses de EEO, fondos externos, necesidad de un puesto específico en el personal o financiación sostenida).
- § Evaluaciones de nuevas especies, MSC/FIP: Aumento de la carga de trabajo del personal, necesidad de un puesto específico en el personal o de racionalizar la financiación.

Main duties

- § Improve and implement stock assessments based on the best available science
- § Test harvest strategies using MSE
- § Statistical support in designing data collection programs

Strengths

- § Mostly Permanent, high-level, highly dedicated staff

Challenges

- § Harvest Strategies: Uncertain and limited funding (e.g., 5 months left on MSE, external funds, need dedicated position in staff or streamline funding)
- § Assessments of new species, MSC/FIPs: Increase workload on staff, need dedicated position in staff or streamline funding

Ecosistema y captura incidental: Fortalezas y Desafíos

Ecosystem and Bycatch Program: Strengths and challenges

Principales funciones

- § Desarrollar enfoques analíticos y evaluar el impacto ecológico de las pesquerías
- § Mitigar el impacto ecológico de las pesquerías
- § Mejorar nuestros conocimientos sobre las interacciones entre los factores medioambientales, el clima y la pesca.
- § Mejorar nuestros conocimientos de los ecosistemas del OPO
- § Investigación sobre FADs
- § Desarrollar el Programa de Monitoreo Electrónico (punto 8.a)
- § Implement ABNJ (part 2) shark project (item 11.b.2)

Fortalezas

- § Personal en su mayoría permanente, de alto nivel y gran dedicación
- § 3 nuevos miembros del equipo

Desafíos

- § Principalmente retos relacionados con los datos (punto 8)

Main duties

- § Develop analytical approaches and evaluate the ecological impacts of fisheries
- § Mitigate the ecological impacts of tuna fisheries
- § Improve our understanding of the interactions among environmental drivers, climate and fisheries
- § Improve our understanding of EPO ecosystems
- § FAD research
- § Develop the Electronic Monitoring Program (see item 8.a)
- § Implement ABNJ (part 2) shark project (item 11.b.2)

Strengths

- § Permanent, high-level, highly dedicated staff
- § 3 new team members

Challenges

- § Mainly data challenges (see item 8)

Programa Biología: Grupo del Ciclo Vital y Comportamiento

Biology Program: Life history & Behavior Group

Main responsibilities

- § Investigaciones sobre la biología y el comportamiento de los túnidos, y obtención de estimaciones de los parámetros poblacionales.
- § Experimentos de marcado de atunes para obtener información vital sobre movimientos y estructura de la población, crecimiento, mortalidad y tasas de explotación

Fortalezas

- § Dos empleados permanentes de alto nivel y gran dedicación (con gran experiencia de trabajo sobre el terreno)

Desafíos

- § Cruceros de marcado: Financiación incierta y limitada, fondos externos, necesidad de un puesto específico en el personal o financiación sostenida)

Main duties

- § Investigations of the biology and behavior of tunas, and deriving population parameter estimates
- § Tuna tagging experiments to obtain vital information on movements and population structure, growth, mortality, and exploitation rates

Strengths

- § Two permanent, high-level, highly dedicated staff (very strong field work experience)

Challenges

- § Tagging cruises: Uncertain and limited funding, external funds, need dedicated position in staff or streamline funding)

Programa Biología: Grupo Ciclo Vital Temprano

Biology Program: Early Life History Group

Main responsibilities

- § Experimentos de campo y de laboratorio para investigar la fase temprana del ciclo vital de los atunes que afectan el reclutamiento de peces jóvenes a la población explotable.
- § Desarrollar herramientas para predecir el reclutamiento de atunes jóvenes a la población explotable.

Fortalezas

- § Personal permanente, de alto nivel y gran dedicación
- § El laboratorio de Achotines, Panamá

Desafíos

- § Jubilaciones inminentes, infraestructura (ítem 12)

Main duties

- § Field and laboratory experiments to investigate the early life history of the tuna that affect the recruitment to the exploitable population.
- § Develop tools to forecast recruitment of young tuna to the exploitable population.

Strengths

- § Permanent, high-level, highly dedicated staff
- § The Achotines Laboratory, Panama

Challenges

- § Impending retirements, infrastructure (item 12)

Preguntas - Questions
