

Ecologically Related Species (ERS) Data

Aggregated effort and scientific observer data (as specified in the [ERSWG Data Exchange](#)) are available by year, gear, CCSBT Statistical Area, and species group. These data include numbers of observed interactions of ecologically related species encountered in the SBT fisheries. Note that the figures are not estimates of total interactions by species group. Data is aggregated over Flag and comprises shots from all Members (except Indonesia) where SBT was targeted or caught.
