Small Longline Vessels in Taiwan and Their Practices

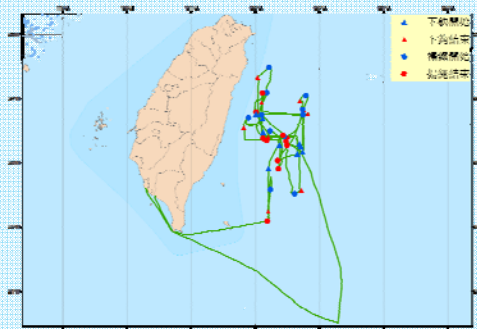

- There are many 20-meter-long small longline vessels in Taiwan.
- Most of them harbor in Dongkang fishing port in southern Taiwan.
- Those fishing vessels operate in Taiwan coastal waters, the South Pacific, the Indian Ocean and etc.

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Small Longline Vessels in Taiwan and Their Practices

- Longline operations included:
Casting, Waiting, Hauling and Moving between fishing grounds.
Usually, it performs the same operation every day.

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Small Longline Vessels in Taiwan and Their Practices

- The length of these long-line fishing vessels is less than 24 meters.
- Living space is quite limited, not room for additional person.
- An additional person, such as observer on board induces a considerable burden.

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Background:

1. An observer on small long-line fishing vessels bring a great burdens due to its tight space.
2. On board observer collect various data, such as type and size of catches, by-catch, operation sea area and etc..
3. An proper E-Observing System might replace the on board observer's duties.

Goals:

Developing an Electric Observing System to substitute the on board human observer.

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

2. E-Monitoring System

- **on board equipment:**

- **4 Video cameras**

- two for bait casting operation and two for hauling operation

- **Digital Video Recorder (DVR) with GPS**

- recording the image of two operations

- **Control System for camera ON/OFF**

- Synchronize with of hauling operation (Camera #1、#2) and bait casting operation (Camera #3、#4)

Camera #2

DVR

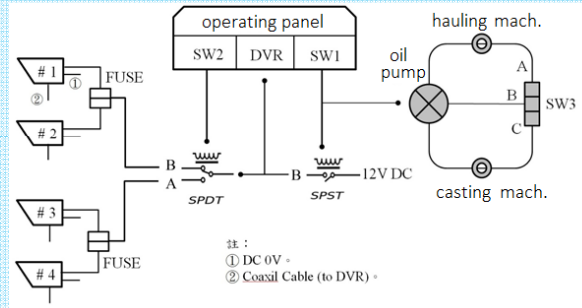

Control system

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronics Engineering

Automatic Power on/off Function

The system startup or shutdown is controlled by casting and hauling operations automatically.

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Synchronous Control System (1/2)

Using power to trigger ON/OFF of video recording module

This architecture targeted at vessels with automatic casting and hauling machine. It uses electronic power as control signal.

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Synchronous Control System (2/2)

Using different signal source to trigger ON/OFF of video recording module

Casting operation

Hauling operation

3. E-Reporting System

General concept of the E-Reporting System

- Input : Videos obtained from the E-monitoring System.
- By using the E-Reporting System, on shore observer surveys these videos, pick out fishing operation data and performs catch analysis.
- Output : fishing operation file and catches data file.
- To perform this system four files were created as E-Monitoring System was installed.

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Space Correction

- The space error induced from camera #1 will be eliminated by a calibration process.
- This process is carried out after the E-Monitoring System was set up.

魚體長 (cm)	89	90	94	102	120	122	123	123	123	123	124	126	127	128	128	129	129	129	129	131
魚體厚度 (cm)	10	12	14	16	16	18	16	22	20	26	18	22	24	20	22	18	28	20	18	24

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronics Engineering

Catches length measurement correction

- Setting a template on the deck floor to produce coordinate system.
- When a catch lies on the floor, measurement by clicking mouse will be performed automatically.

National Cheng Kung University, Taiwan

Preparation Fishing Operation Catch Analysis **Outcomes**

- One day fishing operation (about 16 hours) need 2 hours to survey.
- Below: The obtained file structure of the E-Reporting System
- The outcomes: Catches Image files and Text files.
- The image and detail information of every catch are saved for further usage.

4. Test Results and discussion

Measurement of Catch Length (1/3)

A total of 2178 catches collected from 20 voyages of a 17 meter long-line fishing vessel were used to verify its accuracy through three different approaches.

Method 1. Measurement were carried out on the dock by crew member.

<u>Species</u>	<u>Quantity</u>
Yellow fin tuna:	312
Dolphin fish:	1,060
Sailfish :	104
Others:	702

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Measurement of Catch Length (2/3)

Method 2. Carried out in fish market by NCKU staffs:

- Collected from 6 voyages with max. 20 catches per voyage
- yellow fin tuna and dolphin fish are applied.
- These data are regard as actual length.
- A customized retractable ruler ranges are used. (range:20cm to 312cm)
- Number tags tied for identifying. (below left)
- Performing measurements.(below right)

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Measurement of Catch Length (3/3)

Method 3. Measurement by E-Reporting System:

- On shore observers survey the video and freeze the images of catches.
- Clicking the point of catches' snout and tail fork by the E-Reporting System.
- System will then calculate the length of the catch automatically.

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Error assessment of catch length-1

- Catches length obtained from crew members and NCKU staff are compared.
- The result shows the measurement from crew member and researcher are very identical apart from a few data.

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Error assessment of catch length-2

No.	Dolphinfish			Yellowfin tuna		
	Crew	Market	Error	Crew	Market	Error
1	105	103	2	134	135	-1
2	64	62	2	137	134	3
3	82	83	-1	141	137	4
4	90	101	-11	131	127	4
5	80	79	1	125	121	4
6	68	66	2	133	123	10
7	100	97	3	131	123	8
8	96	94	2	136	138	-2
9	88	92	-4	142	141	1
10	67	70	-3	140	135	5
11	99	97	2	128	123	5
12	93	92	1	143	142	1
13	70	73	-3	142	142	0
14	103	102	1	130	127	3
15	105	103	2	138	140	-2
16	73	76	-3	130	126	4
17	65	68	-3	120	117	3
18	64	62	2	133	130	3
19	86	86	0	150	144	6
20	95	96	-1	152	150	2

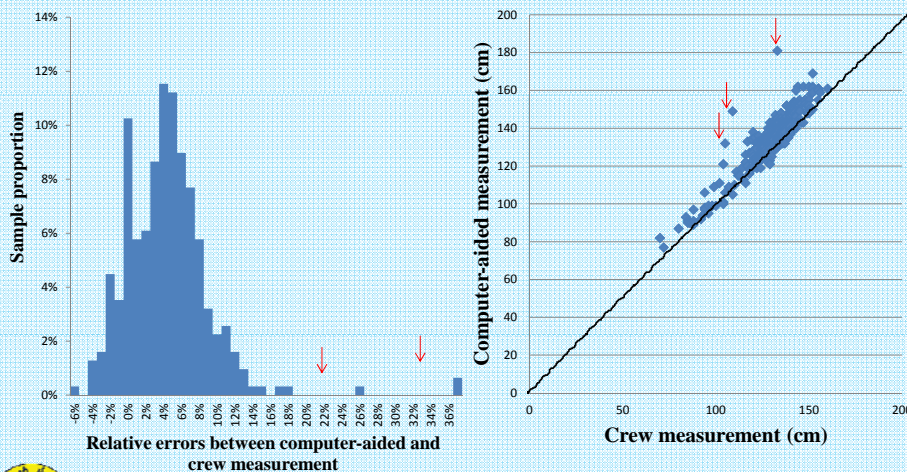

Unit: cm

- 20 pieces of dolphinfish and yellowfin tuna in one voyage.
- Measurements by crew member are fairly similar compare to that of NCKU staffs.
- Only 2 of them deviate more than 10 cm.

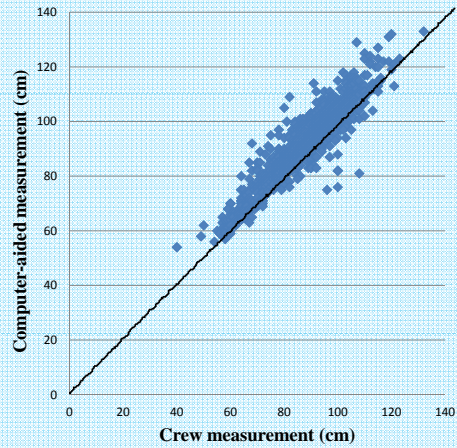

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Error assessment of catch length- Yellowfin tuna (n=312)

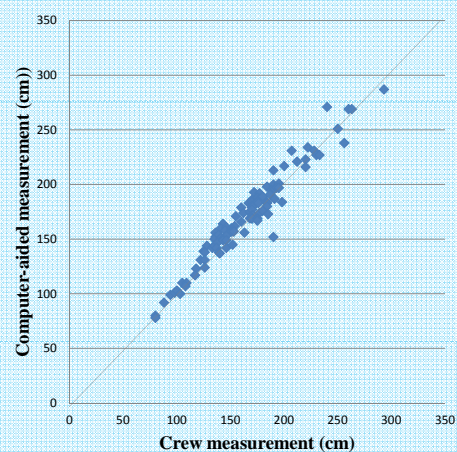

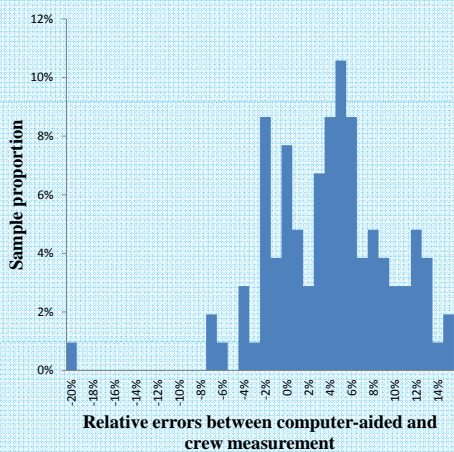

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Error assessment of catch length- Dolphin fish (n=1060)

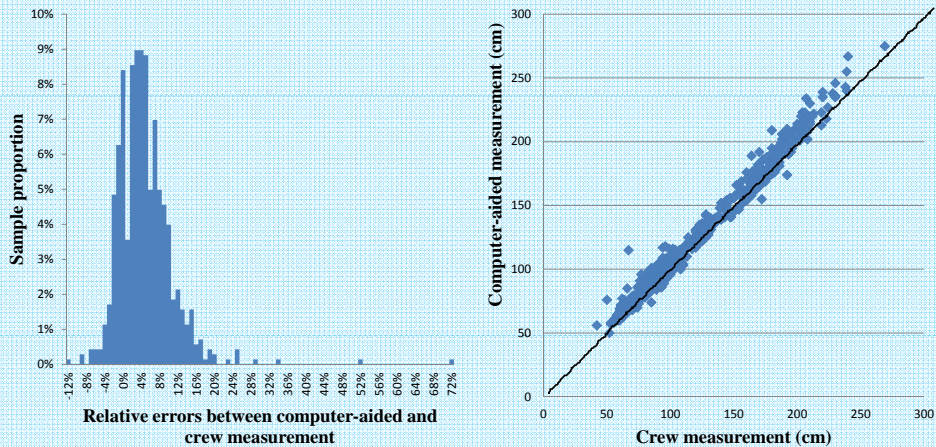

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Error assessment of catch length- Sailfish (n=104)

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

Error assessment of catch length- Others (n=702)

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

5. Conclusions

- An E-Monitoring System for small long-line fishing vessels was developed, and it had been tested on a 17 meters long vessel for more than one year.
- More than 2000 catches from 20 voyages show that their lengths measured by the E-Reporting System are very close with the length measured by the crews. Deviations less than 10% occupy about 90% of the data.
- The E-Reporting System is able to retrieve fishing operation information and catch data from the E-Monitoring System. One day fishing operation about 16 hours need 2 hours to survey

National Cheng Kung University, Taiwan
Department of Systems and Naval Mechatronic Engineering

5. Conclusions

Since this E-Observing System could collect many valuable data from the recovery videos of E-Monitoring System, it is believed that the developed System possess potential to replace the duties of on board observer.
