

Supplementary Figure 4. Relationships (A) of testis length (in millimeters) to fork length (in centimeters) and (B) of epididymus width (in millimeters) to fork length (in centimeters) of male blue sharks (*Prionace glauca*) caught along the northeastern coast of North America between New Jersey and the Flemish Cap in 2003–2016. Open circles and black triangles indicate individuals in the mature and immature stages, respectively. The vertical dotted lines represent the lengths of the smallest mature and largest immature samples.
